

## Simplify File Transfers to Xinet® WebNative®

nStream simplifies the routine process of uploading as well as downloading files by your customers

Customer specific file dropbox and pickup locations for improved control and security

Ability to hide or show top-level user volumes from your customers

Progress indicator bar

Custom branding and advertising area for customer relations opportunities

Clickable banner for linking to a website or email address

Drag-and-drop functionality complete with folder uploads and current status of batch transfers

## Fast, Proven and Reliable. Up and Running in Minutes.

nStream™ is a simple, error-free way for uploading and downloading files and folders to a Xinet WebNative server using a standalone, cross-platform application. Customers only need to know their username, password and address for your server. By utilizing a non-browser interface the user is protected from typical site-display errors, browser crashing, and accidental closing of the upload window. Files are where you want them to be. Once files are uploaded they are immediately available through your Xinet FullPress® and WebNative server. The nStream interface allows for customization to compliment your customer's normal browser-based interaction. The customization is dictated by settings on the server and makes no permanent modification to the nStream application.

### Minimum Client Recommendations:

Macintosh OS X 10.2.2, Macintosh OS 9.1 or Microsoft Windows 98

### Minimum Server Requirements:

Xinet WebNative or WebNative® Venture 5.02

### Language Support:

Provides automatic localization in several languages, including English, French, German, Japanese, Spanish and Swedish.
